

AMENDMENT TO THE SPECIFICATION

Please replace the fourth paragraph on page 5, beginning at line 28 with the following:

As the epoxy component, any thermosetting epoxy resin may be used which is capable of being B-staged, as will be discussed in more detail herein. Particularly desirable are solid epoxy resins and, in particular, tri- or multi-functional epoxy resins. Non-limiting examples of useful epoxy resins include solid epoxy resins derived from bisphenol A or F, tetramethyl and/or biphenyl, and epichlorohydrin, ~~nevalacs~~, novolacs, and the like. Triglycidyl isocyanurate (TGIC) is particularly desirable. An example of a particularly useful product is tris(2,3-epoxy-propyl) isocyanurate, sold under the tradename TEPIC® by Nissan Chemical Industries, Ltd.
